

Hyland provides a full range of ready mix construction services for the residential and commercial markets.

We combine our own aggregate, the highest quality cement, water, and special additives for the delivery of the product to your jobsite.

In addition to a variety of custom homes and working insulated concrete forms some of our recent projects include:

- Mazda & Toyota dealerships
- Comox sewage treatment
- Slegg Lumber distribution centre

Our company-owned fleet of ten mixer trucks, a truck-mounted boom pump with a reach of almost 100 feet and experienced drivers provide maximum flexibility to meet customer demands.

Our automated central dispatch system allows our dispatcher to be continuously

informed of jobsite progress and truck availability, thus providing optimum utilization of the truck fleet and service to the customer. If you need an extra load we can deliver.

Utilizing our own aggregate sources, concrete batch plant, mixer trucks, gravel trucks and a motivated, competent workforce, we are the only full service operator in the Comox Valley.

Our specialty is handling unique projects. You can rely on Hyland for concrete designed to meet the specifics of your project and customer service such as helping you measure your project, assisting you in obtaining qualified professionals and on time delivery.

For additional information on our Ready mix products and services call Chris Huber at (250) 336-2412 or go to our website at:
